

L.N. 96 of 2002**PRODUCT SAFETY ACT
(ACT NO. V OF 2001)****Two or Three-Wheel Motor Vehicles (EC Type-Approval)
Regulations, 2002**

In exercise of the powers conferred by articles 38 to 40 of the Product Safety Act, 2001, the Minister for Economic Services, on the advice of the Malta Standards Authority, has made the following regulations:-

1.1. The title of these regulations is the Two or Three-Wheel Motor Vehicles (EC Type-Approval) Regulations, 2002. Citation and commencement

1.2. These regulations shall become operative on the 30th November, 2002, hereafter referred to as the effective date.

1.2.1. Provided that for a period of thirty (30) days following the effective date, vehicles, in terms of regulation 2.1 of these regulations, which are not in possession of the Certificate of Conformity referred to in regulation 6.1 of these regulations shall, nonetheless, be allowed into Malta if the person placing such vehicles on the market can prove that they had been ordered at least six (6) months prior to the effective date.

1.2.2. Provided that the Malta Transport Authority, set up under the provisions of the Malta Transport Authority Act, shall act as the Maltese 'approval authority' in terms of regulation 3.1.13 of these regulations, from such date as the Minister responsible for consumer affairs, after consultation with the Malta Standards Authority and the Malta Transport Authority, may prescribe.

1.2.3. Provided that the requirement to provide information to the European Commission, referred to in regulation 12.1.2 of these regulations, shall come into force on such date as the Minister responsible for consumer affairs, after consultation with the Malta Standards Authority, may prescribe.

Scope

2.1. These regulations shall apply to all two or three-wheel motor vehicles, twin-wheeled or otherwise, intended to travel on the road, and to the components or separate technical units of such vehicles.

2.1.1. These regulations do not apply to the following vehicles:

- vehicles with a maximum design speed not exceeding 6 km/h,
- vehicles intended for pedestrian control,
- vehicles intended for use by the physically handicapped,
- vehicles intended for use in competitions, on roads or whatever the terrain,
- vehicles already in use before the application date of the Directive,
- tractors and machines, used for agricultural or similar purposes,
- vehicles designed primarily for off-road leisure use having wheels arranged symmetrically with one wheel at the front of the vehicle and two at the rear,

nor to the components or technical units thereof unless they are intended to be fitted to vehicles covered by the Directive.

2.1.2. These regulations do not apply either to the type-approval of single vehicles except that Member States granting such approvals shall accept any competent type-approval of components and separate technical units granted under the Directive instead of under the relevant national requirements.

2.2. The vehicles referred to in regulations 2.1, 2.1.1 and 2.1.2 shall be subdivided into:

- moped, i.e. two or three-wheel vehicles fitted with an engine having a cylinder capacity not exceeding 50 cm³ if of the internal combustion type and a maximum design speed of not more than 45 km/h,
- motorcycles, i.e. two-wheel vehicles with or without sidecar, fitted with an engine having a cylinder capacity of more than 50 cm³ if of the internal combustion type and/or having a maximum design speed of more than 45 km/h,
- motor tricycles, i.e. vehicles with three symmetrically arranged wheels fitted with an engine having a cylinder capacity of more than 50 cm³ if of the internal combustion type and/or a maximum design speed of more than 45 km/h.

2.3. These regulations shall also apply to quadricycles, i.e. motor vehicles with four wheels having the following characteristics:

(a) light quadricycles whose unladen mass is less than 350 kg, not including the mass of batteries in case of electric vehicles, whose maximum design speed is not more than 45 km/h and whose engine cylinder capacity does not exceed 50 cm³ for spark-ignition engines (or whose maximum net power is no more than 4 kW for other types of engines); these shall be considered to be mopeds;

(b) quadricycles, other than those referred to in (a), whose unladen mass is not more than 400 kg (550 kg for vehicles intended for carrying goods), not including the mass of batteries in the case of electric vehicles, whose maximum net engine power does not exceed 15 kW; these shall be considered to be motor tricycles.

3.1. For the purposes of these regulations, the following Definitions definitions shall apply:

3.1.1. "The Directive" means Council Directive 92/61/EEC¹, as amended by Directive 2000/7/EC on the approximation of the laws of the Member States relating to the type-approval of two or three-wheel motor vehicles;

3.1.1.1. "Separate Directive" means a Directive specified in Annex I or III to the Directive (reproduced as Schedule I or III hereto);

3.1.2. "Type of vehicle" means vehicles belonging to the same category (two-wheel mopeds; three-wheel mopeds; motorcycles; motorcycles with sidecar; motor tricycles; quadricycles) and constructed by the same manufacturer, having the same chassis and the same type designation given by the manufacturer.

3.1.2.1. A type of vehicle may include variants and versions;

3.1.3. "Type of vehicle" means vehicles of the same type with differences which may relate to:

- the shape of the bodywork,
- the mass in running order and the maximum technically permissible mass (difference in excess of 20%),

¹OJ No. L225 of August 10, 1992

- the type of power unit (spark-ignition, compression-ignition, electric, hybrid, etc.),
- operating cycle (two- or four-stroke),
- cylinder capacity (difference in excess of 30%),
- number and configuration of cylinders,
- power (difference in excess of 30%),
- operating mode (of electric motors),
- number and capacity of traction batteries.

3.1.3.1. Variants may include versions;

3.1.4. "Version" means vehicles of the same type and, as the case may be, of the same variant displaying differences which may relate to

- power transmission (automatic or non-automatic gearbox, transmission ratios, gear selection method, etc.),
- cylinder capacity (difference of not more than 30%),
- power (difference of not more than 30%),
- mass in running order and maximum technically permissible mass (difference of not more than 20%),
- other minor modifications made by the manufacturer concerning the essential characteristics contained in Annex II of the Directive, reproduced as Schedule II hereto;

3.1.5. "Separate technical unit" means an element or characteristic which must meet the requirements of a separate directive and which is intended to form part of a vehicle. It may be component type-approved separately, but only in conjunction with one or more specific types of vehicle;

3.1.6. "Component" means an element or characteristic which must meet the requirements of a separate directive and which is intended to form part of a vehicle. It may be component type-approved independently of a vehicle.

3.1.6.1. A separate technical unit or component may either be original equipment - fitted initially or as a replacement - if it is of the type fitted to the vehicle when the latter is type-approved, or be non-original equipment solely in the case of replacements;

3.1.7. "Type-approval" means the procedure whereby a Member State certifies that a type of vehicle satisfies the technical requirements set out in the separate directives and the checks on the correctness of the manufacturer's data, as provided for in the exhaustive list set out in Annex I of the Directive, reproduced as Schedule I hereto;

3.1.8. "Component type-approval" means the procedure whereby a Member State certifies that a characteristic or a separate technical unit (type-approval of a separate technical unit) or a component (component type-approval) satisfies the technical requirements of the relevant separate directive as provided for in the exhaustive list set out in Annex I, reproduced as Schedule I hereto. Type-approval or component type-approval may be extended to include any modifications, variants or versions;

3.1.9. "Twinned wheels" means two wheels mounted on the same axle, the distance between the centres of their areas of contact with the ground being less than 460 mm. Twinned wheels shall be considered as one wheel;

3.1.10. "Twin-propulsion vehicles" means vehicles with two different systems of propulsion, for example an electric system and a thermic system;

3.1.11. "Manufacturer" means the person or body responsible to the approval authority for all aspects of the vehicle type-approval or component type-approval process and for ensuring conformity of production. It is not essential that the person or body is directly involved in all stages of the construction of the vehicle, component or separate technical unit covered by the approval process;

3.1.12. "Technical service" means the organisation or body that has been appointed as a testing laboratory to carry out tests or inspections on behalf of the approval authority of a Member State. This function may also be carried out by the approval authority itself.

3.1.13. "Approval authority" means the competent authority of a Member State which is responsible for all aspects of type-approval of a type of vehicle, system, component or separate technical unit, to issue and (if appropriate) to withdraw approval certificates, to serve as the contact point with the approval authorities of the other Member States and which is responsible for verifying the manufacturer's conformity of production arrangements,

4.1. Applications for type-approval or component type-approval shall be submitted by manufacturers to the approval authority. They shall be accompanied by an information document, a model of which, for vehicle type-approval purposes, is set out in Annex II of the Directive (reproduced as Schedule II hereto) and, for component type-approval purposes, is contained in an Annex or Appendix to the relevant separate technical unit or component directive, and also by the other documents referred to in the information document.

Procedures for
granting Type-
Approval or
Component Type-
Approval

4.1.1. Applications for a given type of vehicle, separate technical unit or component may be submitted to one Member State only.

4.2. The approval authority shall grant type-approval to all types of vehicle, and component type-approval to separate technical units or components if these meet the following conditions:

4.2.1. the type of vehicle meets the technical requirements of the separate directives and is as described by the manufacturer in accordance with the data provided for in the exhaustive list set out in Annex I of the Directive, reproduced as Schedule I hereto;

4.2.2. the separate technical unit or component meets the technical requirements of the relevant separate directive and is as described by the manufacturer in accordance with the data provided for in the exhaustive list set out in Annex I of the Directive, reproduced as Schedule I hereto.

4.3. Before conducting type-approval or component type-approval, the approval authority shall take all necessary steps to ensure, if necessary in cooperation with the competent authorities in the Member State where manufacturing takes place or the product is brought into the Community, that there is compliance with the provisions of Annex VI of the Directive, reproduced as Schedule VI hereto, in order that the new vehicles manufactured, placed on the market, offered for sale or put into service, conform to the type approved and that the new separate technical units or components manufactured, placed on the market and sold conform to the type which has been component type approved.

4.4. The approval authority referred to in regulation 4.3 of these regulations shall ensure, if necessary in cooperation with the competent authorities in the Member State where manufacturing takes place or the product is brought into the Community that the provisions of Annex VI of the Directive, reproduced as Schedule VI hereto, continue to be observed.

4.5. Where an application for type-approval is accompanied by one or more component type-approval certificates issued by one or more other Member States, the approval authority shall be obliged to accept them and shall not perform, in respect of the components and/or separate technical units which have been component type-approved, the checks required by regulation 4.2.2 of these regulations.

4.6. Each Member State shall be responsible for the component type-approvals that it grants. The competent authorities in the Member State which grant type-approval for a type of vehicle shall check conformity of production, where necessary in cooperation with

those competent authorities in the other Member States which have issued component type-approval certificates for components or separate technical units.

5.1. The approval authority shall fill in all the headings of the type-approval form contained in Annex III of the Directive, reproduced as Schedule III hereto, for all types of vehicle in respect of which it conducts type-approval. The Type-Approval Process

5.1.1. The approval authority shall fill in the columns in the component type-approval certificate contained in an Annex or an Appendix to each relevant separate directive, for each type of separate technical unit or component in respect of which it conducts component type-approval.

5.2. The approval authority shall forward to those of the other Member States, within one month, a copy of the type-approval certificate filled in for each type of vehicle that it type-approve or refuse to type-approve.

5.2.1. The approval authority shall apply the provisions of regulation 5.2 of these regulations to the component type-approval certificates filled in for each type of separate technical unit or component that it component type-approves or refuse to component type-approve.

6.1. A certificate of conformity, a model of which is shown in Annex IV-A of the Directive (reproduced as Schedule IV-A hereto) shall be completed by the manufacturer for each vehicle produced in conformity with the type that has been approved. Certificate of Conformity

6.1.1. However, for reasons of vehicle taxation² or in order to draw up the vehicle registration document, it may be requested that the certificate of conformity contains details other than those mentioned in Annex IV-A of the Directive (reproduced as Schedule IV-A hereto), provided that those details are explicitly included in the information document.

6.2. A certificate of conformity, a model of which is shown in Annex IV-B of the Directive (reproduced as Schedule IV-B hereto), shall be completed by the manufacturer for each non-original separate technical unit or component manufactured in conformity with the type that has been component type-approved.

6.2.1. That certificate is not required for original separate technical units or for components.

²The Motor Vehicles Registration Tax Act, Cap. 368.

6.3. Where the separate technical unit or component to be component type-approved performs its function or displays a specific characteristic only in conjunction with other components of the vehicle and for this reason compliance with one or more requirements can be verified only when that separate technical unit or component to be approved functions in conjunction with other vehicle components whether real or simulated, the scope of the component type-approval of that separate technical unit or component must be restricted accordingly.

6.3.1. The component type-approval certificate for a separate technical unit or component shall then set out any restrictions on use and any instructions for fitting it.

6.3.2. Compliance with these restrictions and requirements shall be verified when the vehicle is type-approved.

6.4. Without prejudice to regulation 6.2 of these regulations, the holder of a component type-approval for a separate technical unit or component that has been granted under regulations 4.2 to 4.6 of these regulations shall be obliged to affix to each such unit or component manufactured in conformity with the type that has been component type-approved, his factory or trade mark, a statement of the type and, if the separate directive so requires, the component type-approval mark referred to in Article 8.

6.4.1. In this latter case, he is not required to complete the certificate provided for in regulation 6.2.

6.5. Any holder of a component type-approval certificate which, under regulation 6.3, contains restrictions on use, must supply detailed information on those restrictions and must give fitting instructions, where appropriate, with each separate technical unit or component manufactured.

6.6. Any holder of a component type-approval certificate for a separate technical unit of non-original equipment, issued in connection with one or more types of vehicle, must with each such unit supply detailed information allowing those vehicles to be identified.

Type-Approval
Mark

7.1. Any vehicle produced in conformity with the type which has been type-approved must bear a type-approval mark consisting of the following:

- the type-approval number,
- the letter 'e', followed by the identifying number or initials of the Member State conducting the type-approval,

- the vehicle identification code, in numbers or letters as appropriate.

7.2. Any separate technical unit and any component produced in conformity with the type which has been component type-approved must include, if the relevant separate directive so provides, a component type-approval mark which meets the requirements set out in Annex V of the Directive, reproduced as Schedule V hereto.

7.2.1. However, the information contained in that component type-approval mark may be supplemented by further information enabling certain characteristics that are specific to the separate technical unit or component at issue to be identified.

7.2.2. That further information shall, where appropriate, be specified in the separate directives on those separate technical units or components.

8.1. On grounds relating to the construction and functioning of new vehicles, their registration, sale or entry into service shall only be permitted if, and only if, they are accompanied by a valid certificate of conformity.

Registration and
entry into service

8.1.1. The market, sale, entry into service or use of new vehicles complying with these regulations shall not be prohibited.

8.1.2. Only vehicles complying with these regulations may be presented for initial registration.

8.2. The placing on the market, sale or use of new separate technical units or new components complying with these regulations shall not be prohibited.

8.2.1. Only separate technical units and components complying with these regulations may be placed on the market and sold for the first time for use in Malta.

8.3. These regulations shall not affect the right of the Maltese authorities to lay down - in accordance with the Treaty - the requirements which they consider necessary to ensure the protection of users during the use of the vehicles in question, provided that this does not entail modification to the vehicles.

9.1. By way of derogation from regulations 8.1, 8.1.1, 8.2 and 8.2.1:

Exemptions

9.1.1. vehicles, separate technical units and components intended:

- either for production in small series of up to a maximum of 200 units a year per type of vehicle, per component or per separate technical unit,

- or for the armed forces, law enforcement agencies, civil defence services or public-works bodies,

may be exempted from compliance with any of the requirements of the separate directives. The other Member States shall be informed of these exemptions within one month of their being granted;

Manufacturer's
responsibility

10.1. The manufacturer shall be responsible for the manufacture of each vehicle or the production of each separate technical unit or component in compliance with the type which has been type-approved or component type-approved. The final cessation of production or any changes to the information contained in the information document must be notified by the type-approval or component type-approval holder to the approval authority which issued that type-approval or component type-approval.

10.1.1. If the approval authority considers that a change of this type does not involve any change to the existing type-approval or component type-approval certificate, or the drawing up of a new type-approval or component type-approval certificate, it shall inform the manufacturer accordingly.

10.1.2. If the approval authority confirms that a change in the information set out in the information document justifies new checks or new tests, it shall inform the manufacturer accordingly and shall perform those tests. Should the checks or tests involve amendments to the existing type-approval or component type-approval certificate or the drawing up of a new certificate, the approval authority shall send the updated documents to the competent authorities in the other Member States not later than a month after the date on which they were drawn up.

10.2. Where a type-approval or component type-approval certificate ceases to have effect as a result of final cessation of production of the type of vehicle that has been type-approved or of the separate technical unit or component that has been component type-approved, the approval authority which has carried out that type-approval or component type-approval shall inform the competent authorities in the other Member States within one month.

11.1. If the approval authority which has conducted type-approval or component type-approval finds that vehicles, separate technical units or components do not conform to the type that it has type-approved or component type-approved, it shall take the necessary measures to ensure that the production of any item that has been type-approved or component type-approved is again in conformity.

Nonconformity with
the approved type

11.1.1. The approval authority shall inform the authorities in the other Member States of the measures taken which may, where necessary, extend to the withdrawal of type-approval or component type-approval.

11.2. If the approval authority finds that vehicles, separate technical units or components do not conform to the type that has been type-approved or component type-approved, it may request the Member State which has conducted the type-approval or component type-approval to verify the irregularities found.

11.2.1. Any Member State which has conducted type-approval or component type-approval shall conduct the necessary check within six months following the date of receipt of that request.

11.2.2. Should a failure to conform be established, the competent authorities in the Member State which has conducted type-approval or component type-approval shall take the measures set out in regulations 11.1 and 11.1.1 of these regulations.

11.3. The competent authorities in the Member States shall inform each other, within one month, of the withdrawal of any type-approval or component type-approval granted and of the reasons for such measure.

11.4. If the Member State which has granted type-approval or component type-approval disputes the failure to conform notified to it, the Member States involved shall endeavour to resolve the matter. The Commission shall be kept informed and, where necessary, shall hold appropriate consultations in order to reach a settlement.

12.1. If it is found that vehicles, separate technical units or components constitute a road safety hazard, even though they are of a type which has been type-approved or component type-approved, the sale, entry into service or use thereof on the Maltese territory may, for a maximum period of six months, be prohibited.

Notification of
decisions and
remedies available

12.1.1. The Consumer and Industrial Goods Directorate³ of the Malta Standards Authority shall be informed forthwith and with the reasons for such decision.

12.1.2. The Consumer and Industrial Goods Directorate of the Malta Standards Authority shall immediately inform the Commission and other Member States of any measures taken in pursuance of regulation 12.1 of these regulations.

12.2. Any decision concerning the refusal or withdrawal of type-approval or component type-approval, a ban on the sale or use of a vehicle, separate technical unit or component taken in pursuance of the provisions adopted in implementation of these regulations shall state in detail the reasons on which it is based.

12.2.1. It shall be notified to the party concerned, who shall, at the same time, be informed of the remedies available under the laws in force in Malta and of the time limits allowed for the exercise of such remedies.

Copies of EEC and
EC Directives

13.1. Copies of EEC and EC Directives referred to in these regulations and listed in Schedule VII to these regulations can be obtained from the Consumer and Industrial Goods Directorate of the Malta Standards Authority.

LIST OF SCHEDULES

Schedule	Based on Annex to The Directive	Contents
I	I	Complete list of vehicle components and characteristics to be checked
II	II	Information document for the purposes of vehicle, separate technical unit or components for type-approval
III	III	Type-Approval Form
IV	IV	Certificate of Conformity
V	V	Component Type-Approval Mark
VI	VI	Provisions relating to checking the conformity of production
VII	Nil	List of Directives on Two or Three-Wheel Motor Vehicles

Schedule I

Based on Annex I of the Directive

The vehicle components and characteristics on the exhaustive list below are followed by 'CONF' if their conformity with the manufacturer's data has to be checked or by 'SD' if their conformity with requirements laid down at Community level has to be checked.

Heading No	Heading	Term
1	Make	CONF
2	Type/Variant/Version	CONF
3	Name and address of vehicle manufacturer	CONF
4	Name and address of vehicle manufacturer's authorised representative, if any	CONF
5	Category of vehicle ⁽¹⁾	CONF
6	Number of wheels and their position in the case of a three-wheel vehicle	CONF
7	Outline drawing of frame	CONF
8	Name and address of engine manufacturer (if different from vehicle manufacturer)	CONF
9	Make and description of engine	CONF
10	Type of engine ignition	CONF
11	Engine operating cycle ⁽²⁾	CONF
12	Type of engine cooling	CONF
13	Type of engine lubrication ⁽³⁾	CONF
14	Number of configuration of cylinders or stators (in the case of rotary-piston engines) in the engine	CONF
15	Bore, stroke, cylinder capacity or volume of combustion chambers (in the case of rotary-piston engines) in the engine	CONF
16	Full diagram of the engine's induction system ⁽⁴⁾	CONF
17	Engine compression ratio ⁽⁵⁾	CONF
18	Maximum torque and maximum net power of engine, whether this is: – of the spark-ignition or compression-ignition type, or – electric	SD CONF
19	Anti-lampering measures for mopeds and motorcycles	SD
20	Fuel tank ⁽⁶⁾	SD
21	Traction battery(ies)	CONF
22	Carburettor or other engine fuel supply system (type and make) ⁽⁷⁾	CONF
23	Electrical system (nominal voltage)	CONF
24	Generator (type and maximum output) ⁽⁸⁾	CONF
25	Maximum design speed of the vehicle	SD
26	Masses and dimensions	SD
27	Coupling devices and their attachment	SD
28	Anti-air pollution measures ⁽⁹⁾	SD

Heading No	Heading	Term
29	Tyres	SD
30	Transmission	CONF
31	Braking system	SD
32	Installation of lighting and light-signalling devices on the vehicle	SD
33	Lighting and light-signalling devices the mandatory or optional presence of which is laid down in the installation requirements under heading No 32	SD
34	Audible warning device	SD
35	Position of rear registration plate	SD
36	Electromagnetic compatibility	SD
37	Sound level and exhaust system ^(*)	SD
38	Rear-view mirror(s)	SD
39	External projections	SD
40	Stand (except in the case of vehicles having three or more wheels)	SD
41	Devices to prevent unauthorised use of the vehicle	SD
42	Windows; windscreen wipers; windscreen washers; devices for de-icing and de-misting three-wheel mopeds, motor tricycles and quadricycles with bodywork	SD
43	Passenger hand-hold for two-wheel vehicles	SD
44	Anchorage points for safety belts and safety belts for three-wheel mopeds, motor tricycles and quadricycles with bodywork	SD
45	Speedometer	SD
46	Identification of controls, tell-tales and indicators	SD
47	Statutory inscriptions (contents, location and method of affixing)	SD
(*) In the case of twin-propulsion vehicles, if the two systems of propulsion are such that the vehicle falls within the definition either of a moped or of a motorcycle, motor tricycle or quadricycle, the latter definitions shall apply to it.		
(**) Electrically-propelled vehicles are not subject to the requirements relating to this heading. This does not apply to twin-propulsion vehicles in which one of the systems of propulsion is electric and the other thermic.		

Note

The separate directives will lay down specific requirements for low-performance mopeds, i.e. mopeds with pedals, with an auxiliary engine of power not exceeding 1 kW and a maximum design speed not exceeding 25 km/h. These specific characteristics will apply in particular to the components and characteristics covered by heading Nos 18, 19, 29, 32, 33, 34, 41, 43 and 46 of this Annex.

Schedule II

Based on Annex II of the Directive

INFORMATION DOCUMENT ^(a)

(Model)

The following information on the vehicle to be type-approved and the separate technical unit or components to be component type-approved must be supplied in triplicate and be accompanied by a list of contents. All drawings must be sufficiently detailed and presented on an appropriate scale on A4 format or be folded to that dimension. Photographs too must be sufficiently detailed. Where functions are controlled by microprocessors appropriate information concerning performance should be provided. The information document must have a reference number supplied by the applicant.

A. INFORMATION RELATING JOINTLY TO MOPEDS, MOTORCYCLES, MOTOR TRICYCLES AND QUADRICYCLES

0. General

0.1 Make:

0.2 Type (state any possible variants and versions: each variant and each version must be identified by a code consisting of numbers or a combination of letters and numbers):

0.3. Means of type identification if stated on vehicle ^(b)

0.3.1. Location of that means of identification

0.4. Vehicle category ^(c)

0.5. Name and address of manufacturer:

0.6. Name and address of manufacturer's authorised representative, if any:

0.7. Position and method of affixing statutory inscriptions to the chassis:

0.7.1 The serial numbering of the type begins with No:

0.8. Position and method of affixing the component type-approval mark for components and separate technical units:

1. General arrangement of vehicles

1.1. Photos and/or drawings of a typical vehicle:

1.2. Dimensional drawing of the complete vehicle

1.3. Number of axles and wheels (where appropriate, number of crawler tracks or belts):

1.4. Position and arrangement of engine:

2.	Masses (in kg) ^(a)	
2.1.	Mass of vehicle in running order.....	
2.1.1	Distribution of that mass between the axes:	
2.2.	Mass of vehicle in running order, together with rider:	
2.2.1	Distribution of that mass between the axes:	
2.3.	Maximum technically permissible mass declared by the manufacturer:	
2.3.1	Division of that mass between the axes:	
2.3.2	Maximum technically permissible mass on each of the axes:	
2.4	Maximum hill-starting ability at the maximum technically permissible mass declared by the manufacturer:	
2.5.	Maximum towable mass (where applicable):	
3.	Engine ^(a)	
3.0.	Manufacturer:	
3.1.	Make:	
3.1.1.	Type (stated on the engine, or other means of identification):	
3.2	<i>Spark- or compression-ignition engine</i>	
3.2.1	Specific characteristics of the engine	
3.2.1.1.	Operating cycle: spark/compression ignition, four/two stroke ⁽¹⁾	
3.2.1.2.	Number, arrangement and firing order of cylinders:	
3.2.1.2.1	Bore: . . . mm ^(f)	
3.2.1.2.2	Stroke: . . . mm ^(f)	
3.2.1.3.	Cylinder capacity: . . . cm ³ ^(g)	
3.2.1.4.	Compression ratio ⁽²⁾	
3.2.1.5	Drawings of cylinder head, piston(s), piston rings and cylinder(s):	
3.2.1.6	Idling speed ⁽²⁾ .. . min ⁻¹	
3.2.1.7	Maximum net power output:	kW atmin ⁻¹
3.2.1.8	Net maximum torque:	Nm atmin ⁻¹

- 3.2.2. ⁵ Fuel: diesel/petrol/mixture/LPG/other ⁽¹⁾
- 3.2.3. Fuel tank
- 3.2.3.1. Maximum capacity ⁽²⁾:
- 3.2.3.2. Drawing of tank with indication of materials used:
- 3.2.3.3. Diagram clearly indicating the position of the tank on the vehicle:
- 3.2.4. Fuel supply
- 3.2.4.1. Via carburettor(s): yes/no ⁽¹⁾
- 3.2.4.1.1. Make(s):
- 3.2.4.1.2. Type(s):
- 3.2.4.1.3. Number fitted:
- 3.2.4.1.4. Settings ⁽²⁾
i.e. of
- 3.2.4.1.4.1. Diffusers:
- 3.2.4.1.4.2. Level in float chamber:
- 3.2.4.1.4.3. Mass of float:
- 3.2.4.1.4.4. Float needle:
or
- 3.2.4.1.4.5. Fuel curve as a function of the air flow and settings required in order to maintain that curve:
.....
- 3.2.4.1.5. Cold-starting system: manual/automatic ⁽¹⁾
- 3.2.4.1.5.1. Operating principle(s):
- 3.2.4.2. By fuel injection (solely in the case of compression ignition): yes/no ⁽¹⁾

- 1.2.1 Maximum payload declared by manufacturer

2. Equipment

2.1. *Bodywork*

2.1.1. Nature of bodywork:

2.1.2. General dimensional arrangement drawing of inside:

2.1.3. General dimensional arrangement drawing of outside:

2.1.4. Materials and methods of manufacture:

2.1.5. Passenger doors, locks and hinges:

2.1.6. Configuration, dimensions, direction and maximum opening angle of doors:

2.1.7. Drawing of locks and hinges and their location in the doors:

2.1.8. Technical description of locks and hinges:

2.2. *Windscreens and other glazing*

2.2.1. Windscreen

2.2.1.1. Materials used:

2.2.2. Other glazing

2.2.2.1. Materials used:

2.3. *Windscreen wiper(s)*

2.3.1. Detailed technical description (with photographs or drawings):

2.4. *Windscreen washer(s)*

2.4.1. Detailed technical description (with photographs or drawings):

2.5. *Defrosting and demisting*

2.5.1. Detailed technical description (with photographs or drawings):

B 1280

- 2.6 *Rear-view mirror(s)* (please give the following information for each rear-view mirror)
- 2.6.1 Make:
- 2.6.2 Component type-approval mark:
- 2.6.3 Variant:
- 2.6.4 Drawing(s) showing the location of the rear-view mirror(s) in relation to the structure of the vehicle:
- 2.6.5 Detailed information on the method of attachment, including that part of the structure of the vehicle to which the rear-view mirror is attached:
- 2.7 *Seats*
- 2.7.1 Number:
- 2.7.2 Location:
- 2.7.3 Coordinates or drawing of the R point ¹⁰
- 2.7.3.1 Driving seat:
- 2.7.3.2 Other seats:
- 2.7.4 Intended seat-back inclination
- 2.7.4.1 Driving seat:
- 2.7.4.2 Other seats:
- 2.7.5 Seat adjustment range, where appropriate
- 2.7.5.1 Driving seat:
- 2.7.5.2 Other seats:
- 2.8 *Passenger-compartment heating system (where applicable)*
- 2.8.1 Summary description of type of vehicle in respect of the heating system if this uses heat from the liquid engine coolant:
- 2.8.2 Detailed description of the type of vehicle in respect of the heating system if this uses the cooling air or exhaust gases as a heat source, including:
- 2.8.2.1 An overall drawing of the heating system giving its location on the vehicle (and the arrangement of the sound damping devices (including the position of the heat exchange points)):

- 2.8.2.2. An overall drawing of the heat exchanger used in systems utilising the heat from the exhaust gases, or of the parts where that exchange takes place (in the case of heating systems using the heat provided by the engine cooling air):
- 2.8.2.3. A sectional drawing of the heat exchanger or parts where heat exchange takes place, together with a statement of the wall thickness, of the materials used and the characteristics of their surface:
- 2.8.2.4. Specifications regarding the method of manufacture and technical data relating to other major components of the heating system, such as the fan:
- 2.9. *Safety belts*
- 2.9.1. Number and location of safety belts, together with a reference to the seats where that type of equipment may be installed:

D/P	Complete component type-approval mark	Variant (if any)
-----	--	---------------------

Front seats

Rear seats

Centre rear and centre front seats

Special devices (example: seat height adjustment, preloading device, etc.)

D = driver's side
P = front passenger side

2.10 *Anchorage*

- 2.10.1 Number and location of the anchorages:
- 2.10.2. Photographs and/or drawings of the bodywork showing the true, effective location and dimensions of the anchorages, together with an indication of the R-point position
- 2.10.3. Drawings of the anchorages and the parts of the structure of the vehicle to which they are attached (together with a statement of the nature of the materials used):
- 2.10.4 Designation of the types of belts ^(*) authorised for attachment to the anchorages on the vehicle:

	Location of anchorage	
	structure of vehicle	structure of seat
<i>Front</i>		
Right-hand seat { lower anchorages { outside upper anchorages { inside		
Central seat { lower anchorages { right upper anchorages { left		
Left-hand seat { lower anchorages { outside upper anchorages { inside		
<i>Rear</i>		
Right-hand seat { lower anchorages { outside upper anchorages { inside		
Central seat { lower anchorages { right upper anchorages { left		
Left-hand seat { lower anchorages { outside upper anchorages { inside		

- 2.10.5. Description of a specific type of belt, one anchorage of which is attached to the seat back-rest or incorporates an energy-dissipation device:

^(*) 'A': for a three-point belt.

'B': for a lap belt.

'S': for special types of belt, in this case provide specific information on the nature of these types under observations.

'Ar', 'Br' or 'Sr' for a belt incorporating an inertia reel.

'Are', 'Bre' and 'Sre': for a belt equipped with an inertia reel and an energy-absorption device on at least one anchorage.

Footnotes

⁽¹⁾ Delete where inappropriate.

⁽²⁾ State tolerance(s).

^(a) Where a device has been component type-approved, the description may be replaced by a reference to that component type-approval. Likewise, no description is needed where a component's structure is clear from the diagrams or drawings attached to the certificate. State the numbers of the corresponding Annexes for each heading where photographs and drawings must be attached

^(b) Where used, means of identification may appear only on vehicles, separate technical units or components falling within the scope of the separate directive governing components type-approval. Where the method of type identification includes characters which do not relate to the description of the types of vehicle/separate technical unit/component referred to in this information document, those characters are replaced in the documentation by the sign '?' (example: ABC??123??).

^(c) Classification in accordance with the following categories:

- two-wheel moped,
- three-wheel moped and light quadricycle,
- motorcycle,
- motorcycle with side-car,
- motor tricycle and quadricycle.

^(d) 1. *Unladen mass*: mass of vehicle ready for normal use and equipped as follows:

- additional equipment required solely for the normal use under consideration,
- complete electrical equipment, including the lighting and light-signalling devices supplied by the manufacturer,
- instruments and devices required by the laws under which the unladen mass of the vehicle has been measured,
- the appropriate amounts of liquids in order to ensure the proper operation of all parts of the vehicle.

NB: the fuel and the fuel/oil mixture are not included in the measurement, but components such as the battery acid, the hydraulic fluid, the coolant and the engine oil must be included.

2. *Mass in running order*: unladen mass to which the mass of the following components is added:

- fuel: tank filled to at least 90% of the capacity stated by the manufacturer,
- additional equipment normally supplied by the manufacturer in addition to that needed for normal operation (tool kit, luggage carrier, windscreen, protective equipment, etc.).

NB in the case of a vehicle operating with a fuel/oil mixture:

- (a) when the fuel and oil are pre-mixed the word 'fuel' must be interpreted as meaning a pre-mixture of fuel and oil of this type.
- (b) when the fuel and oil are put in separately the word 'fuel' must be interpreted as meaning only the petrol. In this case, the oil is already included in the measurement of the unladen mass.

- 3 *Technically permissible maximum mass*: mass calculated by the manufacturer for specific operating conditions, taking account of factors such as the strength of the materials, loading capacity of the tyres, etc.
- 4 *Maximum payload declared by the manufacturer*: load obtained by subtracting the mass defined in Section 2, with rider, from the mass defined in Section 3.
5. The mass of the rider is taken to be a round figure of 75 kg.

^(a) Where unconventional engines and systems are fitted, information equivalent to that referred under this heading must be supplied by their manufacturer.

^(b) This figure should be to the nearest tenth of a millimetre

^(c) This value should be calculated with $\pi = 3.1416$ to the nearest cm^3 .

^(d) The information requested should be supplied for all possible variants.

^(e) A tolerance of 5% is permitted.

^(f) The 'R point' or 'seat reference point' means the reference point indicated by the manufacturer, which:

- has specific coordinates in relation to the structure of the vehicle,
- corresponds to the theoretical position of the point of rotation of the trunk/thighs (H point) for the lowest normal driving or use position and the rearmost position stated by the manufacturer of the vehicle for each of the seats provided.
- may be taken as a reference by the competent authorities, where they so wish, for each of the seats other than the front seats where the 'H point' cannot be determined by means of the '3-dimensional reference system' or the procedures for determination of the 'H point'.

Schedule III

Based on Annex III of the Directive

TYPE-APPROVAL FORM

(Model)

A. PROCEDURE TO BE FOLLOWED

Completion of a type-approval form, as part of the type-approval procedure, comprises the following operations:

1. Entries against the headings provided for that purpose in the model type-approval certificate set out in Section B below on the basis of corresponding data contained in the information document;
2. Checking the correctness of the corresponding information contained in the information document if the term CONF is opposite the heading in the type-approval document and placing a cross in one of the two boxes, depending upon the outcome of the tests carried out: the first box if the information set out in the information document is correct and the second box if the information is not correct;
3. Checking the conformity of the component or characteristic referred to in the heading with the requirements of the relevant separate directive if the term SD is opposite the heading in the model type-approval certificate, and entering a cross in one of the two boxes, depending upon the result of the checks carried out: the first box if the requirements of the separate directive have been met and the second box if those requirements have not been met;
4. After the checks referred to in Sections 2 and 3 have been carried out, filling in the type-approval certificate shown in Section C.

B. TYPE-APPROVAL CERTIFICATE No

Heading No	Heading	Term	Yes	No

C. TYPE-APPROVAL CERTIFICATE No

I the undersigned certify that the description contained in information document No. . . . supplied by the manufacturer corresponds to the moped/motorcycle/motor tricycle/quadricycle ⁽¹⁾ identified in Section 1 of this type-approval certificate and submitted as a prototype for a series of vehicles.

It emerges from the test carried out that the vehicle described above, which was submitted as a prototype for a series, complied with/does not comply with ⁽¹⁾ the reference (CONF and SD) entered in this type-approval certificate.

Schedule IV

Based on Annex IV of the Directive

A. CERTIFICATE OF CONFORMITY ACCOMPANYING EACH VEHICLE IN THE SERIES OF THE TYPE WHICH HAS BEEN APPROVED

(Model)

I the undersigned (surname and first name)
hereby certify that the following moped/motorcycle/motor tricycle/ quadricycle ⁽¹⁾

- 1 Make:
- 2 Type:
- 2.1. Any version (identified by a code consisting of numbers or a combination of letters and numbers):
.....
- 2.2. Any variant (identified by a code consisting of numbers or a combination of letters and numbers):
.....
3. Maximum engine power in kW:
- 4 Maximum power rating in revs/minute:
5. Cylinder capacity in cm³:
6. Maximum speed in km/h:
7. Noise in dB (A):
- 7.1. Noise when at a standstill (engine speed):
- 7.2. Noise when in motion:
8. Type of 2- or 4-stroke engine and cycle (where appropriate):
9. Mass of unladen vehicle in kg:
10. Original vehicle tyres: size(s) in mm and, where applicable, make:

⁽¹⁾ Delete where inapplicable.

11 Number in type series:
conforms to the type which was approved at: (date):.....
by
described in type-approval certificate No:
and in information document No:

Done at (date):.....

.....
(signature)

.....
(position held)

B 1292

B. CERTIFICATE OF CONFORMITY ACCOMPANYING EACH SEPARATE TECHNICAL UNIT OR COMPONENT NOT FITTED AS ORIGINAL EQUIPMENT TO THE SERIES OF THE TYPE WHICH HAS BEEN COMPONENT TYPE-APPROVED

(Model)

I the undersigned (surname and first name)

hereby certify that the

(separate technical unit or component.)

1 Make:

2 Type:

3 Number in type series:

conforms to the type which was approved at: (date):

by:

described in component type-approval certificate No:

and in information document No:

Done at (date):

.....
(signature)

.....
(position held)

Schedule V

Based on Annex V of the Directive

COMPONENT TYPE-APPROVAL MARK

- 1 The component type-approval mark consists of:
 - 1.1 a rectangle surrounding a lower case letter 'e', followed by the distinguishing number or group of letters of the Member State which has issued component type-approval i.e.:
 - 1 for Germany
 - 2 for France
 - 3 for Italy
 - 4 for the Netherlands
 - 6 for Belgium
 - 9 for Spain
 - 11 for the United Kingdom
 - 13 for Luxembourg
 - 18 for Denmark
 - 21 for Portugal
 - EL for Greece
 - IRL for Ireland
 - 12 for Austria
 - 17 for Finland
 - IS for Iceland
 - FL for Liechtenstein
 - 16 for Norway
 - 5 for Sweden
 - 1.2 the competent type-approval number corresponding to the number of the component type-approval form completed for the separate technical unit or component concerned. The component type-approval number is entered below and close to the rectangle referred to in 1.1. The figures making up the component type-approval number are entered on the same side of the letter 'e' and face the same direction. In order to avoid any confusion with other symbols, Roman numerals must not be used in the component type-approval number.
2. The component type-approval mark is affixed to the separate technical unit or component in such a way as to be indelible and clearly legible, even when the separate technical unit or component is fitted to the vehicle.
3. An example of a component type-approval mark is contained in the Appendix to this Annex.

Appendix

Example of a component type-approval mark

Legend: the above component type-approval mark was issued by Ireland (e IRL) under number 60676.

Schedule VI

Based on Annex VI of the Directive

PROVISIONS RELATING TO CHECKING THE CONFORMITY OF PRODUCTION

1. In order to check that vehicles, separate technical units and components are produced in such a way as to conform to the type which has been type-approved (for vehicles) or component type-approved (for separate technical units or components), the following provisions apply.
 - 1.1. The holder of the type-approval certificate or component type-approval certificate is obliged to:
 - 1.1.1. ensure that there are procedures for the effective monitoring of product quality;
 - 1.1.2. have access to the monitoring equipment necessary for checking the conformity of each type of vehicle which has been type-approved or each type of separate technical unit or component which has been component type-approved;
 - 1.1.3. ensure that the data concerning test results are recorded and the attached documents are kept for a period of 12 months after the cessation of production;
 - 1.1.4. analyse the results of each type of test in order to monitor and ensure the consistency of the characteristics of the product, with due regard for the variations permissible within industrial manufacture;
 - 1.1.5. take steps to ensure that the tests prescribed in the relevant separate Directive are performed for each type of product;
 - 1.1.6. take steps to ensure that any taking of samples or test-pieces which give evidence of non-conformity for the type of test under consideration is followed by a fresh taking of samples and a new test. All necessary measures must be taken to re-establish the conformity of the corresponding production.
 - 1.2. The competent authorities which have issued the type-approval certificate or component type-approval certificate may check at any time the methods used for checking conformity in each production unit.
 - 1.2.1. At the time of each inspection the test and production records must be conveyed to the inspector.
 - 1.2.2. The inspector may select at random samples to be tested in the manufacturer's laboratory. The minimum number of samples may be determined in accordance with the results of the manufacturer's own checks.
 - 1.2.3. Where the quality level appears unsatisfactory or where it seems necessary to check the validity of tests performed in accordance with 1.2.2, the inspector must take samples which will be sent to the technical body which has performed the tests for type-approval or component type-approval.
 - 1.2.4. The competent authorities may perform all the tests prescribed in the separate Directive(s) applying to the product(s) concerned.
 - 1.2.5. The competent authorities must authorise one inspection per year. If a different number of inspections is necessary, it will be specified in each of the separate Directives. If negative results are noted during an inspection, the competent authority must ensure that all necessary measures are taken to re-establish conformity of production as soon as possible.

Schedule VII

DIRECTIVES ON TWO OR THREE-WHEEL MOTOR VEHICLES

(in chronological order)

Nr	Reference	Title
00	92/61/EEC	Type-approval of two or three-wheel motor vehicles
01	93/14/EEC	Braking of two or three-wheel motor vehicles
02	93/29/EEC	Identification of controls, telltales and indicators for two or three-wheel motor vehicles
03	93/30/EEC	Audible warning device for two or three-wheel motor vehicles
04	93/31/EEC	Stands for two-wheel motor vehicles
05	93/32/EEC	Passenger hand-holds of two-wheel motor vehicles
06	93/33/EEC	Protective devices intended to prevent the unauthorized use of two or three-wheel motor vehicles
07	93/34/EEC	Statutory markings for two or three-wheel motor vehicles
08	93/92/EEC	Installation of lighting and light signalling devices on two or three-wheel motor vehicles
09	93/93/EEC	Masses and dimensions of two or three-wheel motor vehicles
10	93/94/EEC	Space for mounting the rear registration plate of two or three-wheel motor vehicles
11	95/1/EC	Maximum design speed, maximum torque and maximum net engine power of two or three-wheel motor vehicles
12	97/24/EC	Certain components or characteristics of two or three-wheel motor vehicles
-	1999/23/EC	Adaptation of directive 93/33/EC
-	1999/24/EC	Adaptation of directive 93/32/EC
-	1999/25/EC	Adaptation of directive 93/34/EC
-	1999/26/EC	Adaptation of directive 93/94/EC
13	2000/7/EC	Speedometers and amendment of Directive 92/61/EEC
-	2000/72/EC	Adaptation of directive 93/31/EC
-	2000/73/EC	Adaptation of directive 93/92/EC
-	2000/74/EC	Adaptation of directive 93/29/EC
